Core gender data systems are underfunded by roughly $450 million per year. That means we have just half of necessary funding to adequately support policy decision-making and accelerate gender equality.

The sectors at highest risk of severe COVID-19 impact account for 41% of women’s employment globally compared to 35% of men’s.

More than half of national statistics offices experienced budget cuts during the pandemic, impeding their ability to monitor key development indicators—let alone the immediate, disparate impacts on women and girls.

Since the onset of COVID-19, national statistics offices in low- and lower-middle-income countries have reported a reduced ability to meet international reporting requirements.

COVID-19 has worsened gender inequalities, and reduced gender data funding will make it more difficult to target effective relief programs.

Despite the rise in COVID-19 cases, the number of countries reporting sex-disaggregated data on cases and deaths has been declining since 2020.

We cannot achieve the Sustainable Development Goals if the data we choose to collect, use and prioritize does not include all of us.
